Week 1:
This week we began our second project. We delegated tasks to each of the team members as well as figuring out what each of our strengths were. We started by creating the code to read in documents and making sure that worked, after that we began to work on the matrix and get the output we need. We also created test cases so we can spruce up our code in the coming week and make it even better.

- Adam S. (10%)
  - Created the repository
  - Helped organize
  - Helped update documentation
  - Repository commits:
    - Created repository and uploaded old project to repository
    - Changed and deleted documentation

- Adam G. (50%)
  - Worked on writing the code to read the input file
  - Worked on the code to take input file and transfer it to the matrix
  - Repository commits:
    - Uploaded code to the repository

- Sam W. (40%)
  - Created all of the test cases
  - Found code resources for reading in text files
  - Helped organize
  - Helped update documentation
  - Uploaded our drucker file and the test cases to the repo
  - Repository commits:
    - Test cases
    - Documentation
